

=====

## Additions included in fitpsf\_GR.py

=====

The new fitpsf.py (named fitpsf\_GR.py) includes an additional object called "**PlanetEvidence**" which supersedes the FMAstrometry object.

There are three user-callable functions:

**Multifit()** runs the pymultinest sampling

**Fit\_Plots()** makes the corner plots from the samples after running Multifit

**Fit\_Stats()** stores the output statistics in a tuple
